Abstract of the disclosure

A method and apparatus for scaling an option list of an application on an application user interface of a mobile terminal device. The option list includes options chosen from a given set. According to the invention the size of the application on the interface is detected, the number of options included in the option list is determined according to the detected size, and the option list within the application is displayed. A computer program is provided for performing these functions. Also a mobile terminal device is provided for supporting application user interfaces of different resolution and/or size by using an application on the application user interface, which includes an option list scaled according to these functions.
